Summary

Computer Science student with Strong Foundation in Java, Python, web development, and AI-assisted software development. Experienced in building practical applications, including banking and recommendation systems, using modern development tools and best practices. Seeking opportunities to apply technical skills in software engineering and continue growing as a developer.

Education

Shobhit Institute of Engineering & Technology

Bachelor of Technology in Computer Science & Engineering

October 2023 - June 2027

Meerut, Uttar Pradesh

Relevant Coursework

Data Structures Algorithms Analysis Computer Networks Web Development
Database Management Internet Technology Computer Architecture

Projects

1. Book & Movie Recommendation System | HTML, CSS, JavaScript, Python, Flash, MongoDB

November 2025

Built an intelligent recommendation engine for movies and books using collaborative filtering and similarity-based ranking algorithms.

- Processed user ratings and interaction data to generate personalized recommendations in real time.
- Developed a full-stack web application with Flask backend and responsive frontend for browsing, rating, and discovering content.
- Stored and managed user activity and book metadata using MongoDB for efficient retrieval and analysis.

2. Keystroke Monitoring System | Python, Tkinter, Pynput, SQLite, JSON

January 2026

Developed a Python-based keystroke monitoring application that records keyboard activity using the Pynputlibrary.

- Built a desktop graphical interface using Tkinter to start and stop the keylogging process and manage user interaction.
- Captured key press and release events and stored the activity logs in structured JSON and text files for analysis.
- Implemented file handling to record keystroke data and maintain activity logs for monitoring purposes.
- Designed a simple log management workflow to track keyboard events and analyze user input behavior.

3. Banking System | Java, OOPs, File Handling, Java Collection, Exception Handling

June 2026

- Developed a console-based banking system supporting Savings and Current account management with secure user authentication.
- Implemented account creation, login, deposit, withdrawal, balance inquiry, and transaction history using Object-Oriented Programming principles.
- Utilized Java File I/O to store customer data and transaction records in text files for persistent storage.
- Implemented automatic account number and passkey generation with exception handling for reliable system performance.

4. Library Management System | Java, OOPs, File Handling, Exception Handling, Java Collection

Present 2026

- Developed a console-based Library Management System supporting book, student, and librarian management using Core Java and Object-Oriented Programming principles.
- Implemented book search, issue, return, reservation, fine calculation, and transaction management
- Utilized Java File I/O to store and retrieve books, users, and transaction records in text files, ensuring persistent data storage.
- Designed a menu-driven application with custom exception handling and modular architecture for secure, reliable, and maintainable library operations.

Technical Skills

Languages: Python, C, JavaScript, Java

Development Tools: VS Code, Google Colab, Jupyter

Technologies/Frameworks: Node.js, Express.js, HTML, CSS

Database Management: MySQL, MongoDB

Version Control & Deployment: GitHub

Design & Prototyping: Figma

AI Development Tools: ChatGPT, GitHub Copilot, Claude, Google Gemini, Black Box, Gamma AI

Others: Data Structures and Algorithm (DSA) , Object Oriented Programming (OOPs)

Soft Skills

Communication, Leadership, Adaptability, Time Management

Certification & Achievement

Certifications

- | | | |
|-----------------------------|---------------|---------------------------|
| • Python Foundation | Swyaam Portal | June 2024 |
| • Java Programming with AI | Unstop | 1 st July 2026 |
| • Java Intermediate with AI | Unstop | 6 th July 2026 |

Achievement

- | | |
|--|--------------------------------|
| • Java Foundation (Badge) | myLearn Oracle (December 2025) |
| • Java Training and Assessment (Badge) | myLearn Oracle (June 2026) |

Experience

Internships

- | | |
|--|---|
| • Cybersecurity Virtual Internship | VOIS & EdunetFoundation (Dec2025–Jan2026) |
| ➤ Completed training in cybersecurity fundamentals including threat detection and risk assessment. | |
| ➤ Explored concepts related to AI applications in cybersecurity and security monitoring. | |
| ➤ Worked on practical exercises related to cyber threats and security awareness. | |
